

Modern Masonry Architectural Line (MMAL)

Shadow Face

Innovation by ...

Day & Campbell
Limited
Rich in history ... building for the future

Shadow block units are ground down on the edges while leaving a raised strip down the middle in an either smooth or polished finishes. These units offer a unique ledge profile like no other.

Shadow block give the appearance of alternating coursing. The top of and bottom of the block are milled down to a ground faced finish while the raised strip in the middle can be left to either match the ground finish or contrast with either standard or polished finishes. The coursing also gives a recessed look, meaning every other course appears to be slightly recessed. Shadow block can add a unique accent to any building.

One-Step Installation: Shadow masonry units provide finished load-bearing or non-load-bearing walls in a single trade, one-step operation. You save time and money.

Maintenance Free: Autoclaved or low pressure cured units are virtually maintenance free.

Low Life-Cycle Costs: Shadow units will last the sustainable life of your building.

Easy-to-Clean: Shadow masonry units can be cleaned with a variety of masonry cleaners. Contact Day & Campbell Limited to find an approved cleaner.

Sealer: Faceal Oleo HD is the only sealer recommended for our products. The sealer performs in a few different ways, but ultimately everything that it does leads to protection and preservation of your

assets value. It is an invisible nanotechnology sealer, meaning that you cannot tell that it has been applied. It is virtually invisible. It does not change the water vapour diffusion characteristics of the substrate (so it remains breathable). It serves as protection against graffiti, water, oil and grease-based contamination. It also helps facilitate the cleaning of and removal of chewing gum, ice and algae. It is also very resistant to mechanical abrasion further protecting the finish. Faceal Oleo HD has very good self-cleaning characteristics for exterior or shower applications. The pollution cannot penetrate the surface so the rain or shower water washes the debris away. Faceal Oleo HD is non-reversible and constitutes a so-called permanent graffiti/pollution protection system. It comes with a 10 year warranty. Contact us for more information.

Mould and Moisture Resistant: In typical use, masonry construction prevents growth of toxic mould because: (a) masonry materials do not provide a needed source of food; and (b) masonry wall systems offer defined water management strategies that effectively (i) resist the penetration of moisture both from the interior and exterior, (ii) minimize accumulation and duration of exposure of materials to moisture, and (iii) facilitate drying. A Canadian research study completed in 2003 showed definitively that wood and gypsum board products are sources of mould: "Under identical conditions conducive to the growth of fungal mould, no mould is produced on clay brick, concrete block and concrete, whereas substrates made of wood and paper products produced measurable amounts."

Durability: Structural integrity and durability make Shadow block masonry units the perfect choice for your residential, institutional, commercial or industrial project.

Fire Protection: Concrete masonry is a non-combustible material, effectively resisting the passage of flames, smoke, and heat through its mass. Accordingly, building codes assign high fire ratings to concrete masonry walls, making them superior firewalls for hotels, retirement home, apartments and

other structures. These same attributes make concrete masonry desirable for foundation walls and basements to safeguard against the spread of fires and to support the structure above without degradation under extreme heat.

Over-sized Units: Units are available in large format sizes.

Applications: Interior and exterior.

Day & Campbell Modern Masonry Shadow Face Stone Colour Options ...

Super White #201
