

Polished Masonry has an easily visible 'aggregate' grain and a significant depth of colour below the brilliant surface. Its colour and aggregate combinations have been carefully selected to create luster and distinction. Available in all our standard sizes as well as our large format.

Architects, designers and contractors have been inspired to use Day & Campbell Modern Masonry Architectural Line (MMAL) of products. Our **Polished Face Blocks** are created to expose the natural beauty of the aggregates offering a beautiful reflective finish similar to marble, limestone or granite.

Each unit is manufactured to the highest standard to meet and exceed the CSA 165 series 04 standards. These integrally coloured units resist fading and will maintain their distinctive beauty through the life cycle of the build with little or no maintenance, in both interior and exterior applications. MMAL products can be polished on multiple faces and are available in a variety of shapes and sizes.

We can even manufacture custom radiuses including bullnosing and chamfering profiles allowing the design professional freedom in conveying ideas through use of versatile concrete or light weight block.

MMAL products are ideal for LEED-based projects.

Modern Masonry Architectural Line (MMAL)

## Polished Innovation by ...

### Benefits of Modern Masonry Architectural Line (MMAL) blocks:

- Recycle & Environmental benefit: up to 50% recycled glass cullet is available in the manufacture of polished units and is sourced from either the blue box program or recycled facilities. The glass has not been modified from its original state other than washing and crushing, further reducing energy consumption
- With Day & Campbell patented technology, units containing glass cullet are made and cured in our autoclave units. The blocks are ready to polish just 8 hours after manufacture which helps keep your projects on time and within budget
- Able to offer up to 100% pre consumer material and 42% post consumer material for LEED® projects
- All concrete and light weight blocks in the MMAL conform to CSA A165 series-04
- Polished units offers low life cycle costs. The high polished finish will last the life time of your project
- Graffiti can be removed easier due to the polishing process which seals most pores on the face of the block, allowing optimum design options while balancing aesthetics and ease of clean up to exterior large walls/spaces, when necessary

- **Sealer:** Faceal Oleo HD is the only sealer recommended for our products. The sealer performs in a few different ways, but ultimately everything that it does leads to protection and preservation of your assets value. It is an invisible nanotechnology sealer, meaning that you cannot tell that it has been applied. It is virtually invisible. It does not change the water vapour diffusion characteristics of the substrate (so it remains breathable). It serves as protection against graffiti, water, oil and grease-based contamination. It also helps facilitate the cleaning of and removal of chewing gum, ice and algae. It is also very resistant to mechanical abrasion further protecting the finish. Faceal Oleo HD has very good self-

cleaning characteristics for exterior or shower applications. The pollution cannot penetrate the surface so the rain or shower water washes the debris away. Faceal Oleo HD is non-reversible and constitutes a so-called permanent graffiti/pollution protection system. It comes with a 10 year warranty. Contact us for more information.

- No VOCs from painting
- Most importantly, we offer many standard colours and aggregates i.e. granite, limestone & glass to choose from or we can work on a custom design and profile for your project.
